10 Hand Tool Brands That Don't Get The Lo Deserve

By **Travis Raynes**

Marketing has taken over the world. Over the years companies have found a way to squeeze advertising lives. In the United States alone there is something like \$120 Billion dollars spent each year just on TV a staggering number, one that it's hard to believe exists outside the National Debt, and at this point you're around just how much that really is. Let me help you out. Of the 186 Countries who's GDP's (Gross Dom-Monetary Fund tracks, that's more than 121 of them and more than the bottom 40 <u>COMBINED!</u> At \$4,00 alone probably boast close to \$100 million in ads by itself. Needless to say, marketing is big business. Co every year to cure all or most of the worlds problems, but instead they spend it just to get you to notice the Evening News and American Idol....crazy isn't it?

These companies (or the agencies they hire) are good at what they do. The key to effectiveness is gettin are apt to buy the product. It's the reason you see Mac Tools logos at car races, bail bondsman signs acr and the reason Army recruiters hang out at high schools.

Then theres publicity you just can't buy.

But despite today's trend of high dollar ads and awkward celebrity endorsements, there are some compa products to sell, just don't spend a Rockefeller sized fortune to tell you about them. There are a number because they aren't relying on the customer base these type of ads generate, sometimes it's because the it, and sometimes it's undoubtedly because their products speak for themselves.

That's why today's focus is on some of those oft forgotten companies that exist solely on their reputation shares, the companies who's products sell themselves, regardless of who's hands they are pictured in, th

get the love and attention they deserve.

In this list I tried to focus on companies have significant product lines, and sell a good portion of items u scientific formula behind the rankings, it's simply a reflection of my own personal observations both in th my real life. Some of these are very famous brands, others not so much, but this list isn't about brand re they get, versus the attention I feel they deserve. If you have any of your own picks (or you have a prob over to our forum and talk about it.

10. J.H. Williams

Williams has been around since 1884. That's a long time ago. To put it into perspective, Chester A. Arthu were only 38 U.S. States, and Coca-Cola wouldn't be invented for 2 more years. Acquired by Snap-On a just Williams Tool Group, it now operates as SO's industrial tool division. As you'll see with several compare not typically marketed at the consumer level and their primary focus is on industrial sites, governme cases, this bodes well for the consumer as marketing costs only drive the cost of the tools up. Williams h certainly worth checking out. Be aware however, there are 2 Williams lines. One is USA made, while the mindful before clicking buy if that's an issue for you.

9. Carlyle

Carlyle is the premium house brand for NAPA. They have a budget Evercraft line, but Carlyle is a step up America, as well as many other places where tools are provided, Carlyle is a regular fixture. They are more is good and prices are reasonable. Carlyle does have a lifetime warranty on all but torque wrenches, but receipt. That's a bummer, but I don't typically shop for warranty. I hope to see some Carlyle tools for rev their Power 90 ratchets and I'm not sure theres a more comprehensive hex bit socket set on the market Online availability is poor and you'll probably have to go to NAPA, but you can check out their products I

8. Channellock

Channellock is another company thats been around since the beginning of measured time. Founded in 18

Clipper Company by George B. DeArment, it is still owned by the DeArment family to this day. I know whenous who Channellock is." True, but this article isn't about companies you've never heard of. In todays drive the market, house brands are pushed beyond others, and fancy new multi-purpose pliers gain all the about a true to their roots company like Channellock. Through the years Channellock pliers have maintain quality, American made, pliers. They aren't flashy chrome, and they don't have self adjusting capabilities they work hard and last forever. I have 20 different pairs of them and wish I had more. Check them out

7. Proto

I routinely profess my unconditional love for Proto. I can't help it. I got my first Proto ratchet from my dathen. It's a long handled, 1/2", J5450 I call "Big Bad John". For my entire adult life it has gotten all the b ratchets cowering with fear, and it's never failed. If you can't bust a fastener with a 5450, you'd better has

The other day my wife's grandfather, who retired as a mechanic in the late 80's, came into my garage for picked up one of my numerous Proto ratchets and commented that Proto made great tools, but you just me how old it was and when I told him I bought it new last year, he looked at me like I was crazy. Being years, he really doesn't keep up on things, but his reaction isn't all that uncommon from people who don Proto is still King. For the majority of the 20th century Proto (Known as Plomb until 1948) was a widely k shops of America, but in 1970 they turned their focus almost entirely on the industrial market and never

Today's Proto is still the high quality stuff it always was, but they just don't market themselves to consur Stanley/B&D since 1984, Proto is their top shelf industrial line opposite the Mac line of premium mechani marketing \$'s go). They are predominantly USA made and import items are very few and far between. Ir near or completely identical to a Mac item in all but color, for half the price. You can view their lineup HEI

6. Armstrong

Armstrong is another old brand thats still thriving. Founded in Chicago in 1890 as Armstrong Bros. Tool history as Danaher's industrial line opposite their Matco mechanics tool division. Armstrong was rolled in

Matco was retained as sole property of Danaher, but the 2 lines still share many traits. As with Proto/Mac offers predominately USA made quality on par with the tool trucks in many cases, at a significantly more known for their very unique looking ratchets which are excellent quality, but when you mention Armstror people have forgotten they exist.

I'd love to see some armstrong reviews here at TIA, but in the mean time you'll have to check them out

5. Martin Tools

When's the last time you were on a tool forum or talking shop in your buddy's garage and someone recording to the state of the state of

4. Blackhawk

If you read my article about Blackhawk a couple weeks back (If not you can read it HERE) then you know here. Blackhawk has a rich history and their mid-century stuff is some of the most sought after collector of being a mainstay in the auto part stores of the country may be gone, Blackhawk is still around and sti they exist as Proto's "budget" industrial line and offer many American made tools. Pretty much anything Taiwan sourced, but regardless of Country of Origin, it's all good stuff. I've said it at least 100 times and sockets and combo wrenches are the best value in their respective categories, bar none. You can get a 1 Blackhawk combos, with ASD open ends like their Proto cousins at Zoro Tools right now for under \$120 s anywhere for a new set. I've recommended them I couldn't tell you how many times, and at least half a communications from people who are tickled to death with what the got for the price.

3. Wright Tools

Founded in 1927, Barberton, OH based Wright Tool is a privately owned company that focuses on the ind high quality tools on par with other high end industrial brands, but unlike most of the other industrial brabig boys, Wright is a smaller, stand alone company. In 2010 Wright introduced their now popular Wright(benefits of Snap-On's FlankDrive+ design, for a fraction of the price. They produce 100% American made thats something worth supporting. Wright is another company I'd love to see here at TIA, but for now yo HERE

2. Wilde Tool

Wild-08... Quality Tools Since 1922

It wouldn't surprise me in the least if you've never heard of Wilde Tool at all. Founded in 1922, Hiawatha manufacturer of high quality, American made, tools. While their name may not ring a bell, if you, your fa bought tools from Sears, Montgomery Ward's, JC Penny's, or even Western Auto, theres a real good char your hands. You see, Wilde has been the OEM for many house brand products over the years, in fact, it's Known primarily for their quality pliers, chisels, and pry bars, Wilde offers a wide range of items. They se well as rebranded items made by others, but all are USA made quality. Affordable too. Their online catalogue.

1. Lang Tools

The most unloved, yet deserving of love, company on our list is Lang Tools. Founded in 1932, Racine, Wi under it's 4th generation of family ownership. They owe a little of their obscure nature to themselves tho brands, a lot of branding for a small company to handle. The best known of these was Kastar, while the c of them. Last year they wised up and consolidated all 4 brands under the Lang banner which I feel will he Like Wilde, even if you've never heard of them, you've used their tools. Remember those old school ratch had before the ratcheting combos came out? Lang invented them, and while they seem a little antiquated time. Lang also manufacturers virtually every thread restorer or "chaser" made in America. Whether you \$65, or the 48 piece set from Mac for \$125, or the 48 piece set from Snap-On for \$129, they all came from

they're all made by Lang. Don't send me any strongly worded messages about how the Snap-On version undisclosed location near the earth's core by holocaust surviving leprechauns and christened in unicorn t Winfield) "we both know that shit ain't the truth". Check out Lang's catalog HERE.
